

E | Improve the route that limits the bound

Analytic capability scaling at three native full-load service states

(a) RRAM, U=128

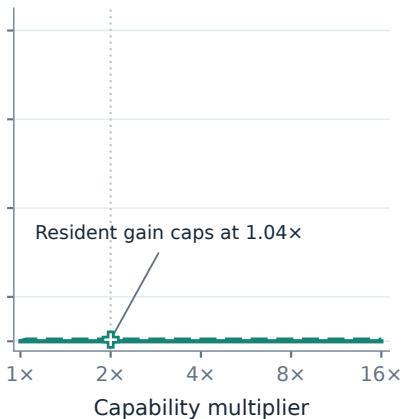

Resident-bound

2x streaming $\rightarrow$ 1.00x gain
2x resident $\rightarrow$ 2.00x gain

(b) MRAM, U=128

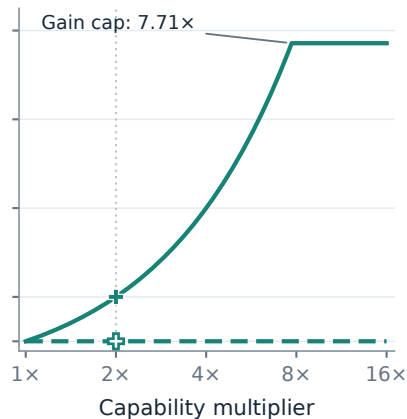

Near balance (resident-bound)

2x streaming $\rightarrow$ 1.00x gain
2x resident $\rightarrow$ 1.04x gain

(c) MRAM, U=1K

Streaming-bound

2x streaming $\rightarrow$ 2.00x gain
2x resident $\rightarrow$ 1.00x gain

— Streaming only: $\rho \rightarrow f\rho$ - - - Resident only: $\tau \rightarrow f\tau$

Single-route upper-bound gains; capacity factors do not represent equal cost
